

From Cllr Antonia Smith re the claimed Bridleway 32

I received the requested flood path map for the areas along the diversion routes this morning. It is very interesting to see that the suggested routes pass through three of the wettest locations in the village, and that the model highlights George Street, where flooding occurred in 2024. This reinforces our local knowledge and presents the information much more clearly. So I wonder whether it would be worthwhile sharing this with Adam, particularly as he is carrying out site visits during the current spell of hot weather, when these wetter areas may not be immediately apparent on the ground.
